

Student Answer Sheet

Subject: Artificial Intelligence

Definition:

- * AI = simulation of human intelligence in machines
- * Covers learning, reasoning, self-correction
- * Applications: speech recognition, visual perception, decision-making

Body:

- * ML: learns from data without explicit programming
- * DL: neural networks detect complex patterns
- * NLP: machines understand language
- * Computer Vision: image/video interpretation
- * Techniques: supervised, unsupervised, reinforcement learning
- * Uses: healthcare, finance, autonomous vehicles

Conclusion:

- * AI reshapes all industries
- * Benefits: automation, efficiency
- * Risks: bias, privacy, job displacement
- * Responsible, transparent AI is required
